

Installation Instructions

In order to install the SimPed program you must download `simped_linux`, `simped_unix` or `simped_windows.zip` into a directory that the path is set to on your local machine. For Linux or Unix version, please rename `simped_linux` or `simped_unix` to `simped` and change access permissions of `simped` (i.e. `chmod a+x simped`); for Windows version please unzip `simped.zip` and then click the icon for `simped.exe`. The executable file for the Windows version was compiled using Cygwin. The library `cygwin1.dll` must also be installed in the same directory as the executable.

For problems concerning installation please contact Suzanne Leal: sleal@bcm.tmc.edu.
